Custom Software Development and Consultancy

Enhance your business performance with high quality bespoke software solutions. We're passionate about your success. We'll spend time understanding your business and focus on delivering the best solution tailored to meet your needs. We're also obsessed with quality. Delivering projects on time and on budget is our mission and our quality management system ensures that we achieve this - every time.

IT Infrastructures ICT and Incident Management

Our consultants, ready to answer any query, are able to help you plan and implement any changes your company may make to your IT infrastructure. This can be anything from planning an office move, upgrading old hardware, replacing end of life hardware or a complete ICT overhaul.

This service provides support for optimising business processes enabling you to increase productivity and efficiency without worrying about the trivialities of day to day IT issues. Support provided within this package:

Recommendations and solutions.
On-going consultancy.
Upgrades.
Dedicated consultants to answer calls and respond to e-mails.

Data Management and Business Intelligence

Our focus is to bring Data Management & Business Intelligence best practices together in our solutions. As a result, even our short term projects have a strategy that addresses the long term data architecture and information needs of your company. Our methodology ensures that even the most complex data management and business intelligence initiatives meet the budget, scope, timeline and quality standards.
